A,Note: the nucleotide sequence was submitted to the EMBL Data Library, June 1996
C,Genetics:
A,Gene: serS
A,Start codon: GTG
C,Function:
A,Start codon: GTG
C,Function: charges tRNA(Ser) with serine
A,Bathway: protein blosynthesis
C,Superfamily: serine-tRNA ligase
C,Superfamily: serine-tRNA ligase
C,Superfamily: serine-tRNA synthetase; ATP; ligase; protein blosynthesis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Conserved hypothetical protein CC1864 [imported] - Caulobacter crescentus

"Lipid phosphate phosphatases dimerise, but this interaction is not required for in vivo activity.";
BMC Biochem. 5:2-2(2004).
-!- FUNCTION: Catalyzes the conversion of phosphatidic acid (PA) to diacylglycerol (DG). In addition it hydrolyzes lysophosphatidic acid (LPA), ceramide-1-phosphate (C-1-P) and sphingosine-1-phosphate (S-1-P). The relative catalytic efficiency is LPA = PA > C-1-P > S-1-P. May be involved in cell adhesion and in cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            substrate recognition, it may confer only structural or functional
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CATALYTIC ACTIVITY: A 3-sn-phosphatidate + H(2)0 = a 1,2-diacyl-

of axial structures. Loss of Ppap2b results in a marked increase in beta-catenin-mediated T-cell factor (TCF) transcription.
-1- SIMILMRITY: Belongs to the PA-phosphatase related phosphoesterase family.

-1- CAUTION: Ref.1 sequence differs from that shown due to a frameshift in position 226.

sn-glycerol + phosphate.
SUBUNIT: Homodimer (By similarity).
SUBCELLULAR LOCATION: Integral membrane protein. Endoplasmic reticulum associated (By similarity).
SUBCELLULAR ppage deficient embryos fail to form a chorio-allantoic placente and yolk sac vasculature. A subset of embryos also show a shortening of the anterior-posterior axis and frequent duplication
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             regulating the Wnt signaling pathway. CATALYTIC ACTIVITY: A 3-sn-phosphatidate + H(2)O = a 1,2-diacyl-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Discognizione del Caralyzas the conversion of phosphatidic acid (PA) to diacyllycarol (DG). In addition it hydrolyses lysophosphatidic acid (PA), ceramide-1-phosphate (C-1-P) and sphingosine-1-phosphate (S-1-P) (By similarity). Involved in the regulation of epithehial differentiation.

- CATALYTIC ACTIVITY: A 3-sn-phosphatidate + H(2)O = a 1,2-diacyl-sn-glycarol + phosphate.

- SUBCELLULAR LOCATION: Integral membrane protein. Endoplasmic reticulum associated.

- SUBCELLULAR LOCATION: Integral membrane protein. Endoplasmic reticulum associated.

- TISSUS SPECIFICITY: Detected in epithelial cells of intestinal mucosa, lung, liver and brain.

- DEVELOPMENTAL STAGE: Expression is increased during epithelial cells of intestinal membrane as well as in kidney, liver
PTM: N-glycosylated.
SIMILARITY: Belongs to the PA-phosphatase related phosphoesterase
                                                                                                                                                                                                                                   Barila D., Murgia C., Nobili F., Gaetani S., Perozzi G.; "Subtractive hybridization cloning of novel genes differentially expressed during intestinal development."; Bur. Truncating neurotrypsin mutation in autosomal recessive nonsyndromic mental retardation.";

E. Science 298:1779-1781(2002).

-1- FUNCTION: Plays a role in neuronal plasticity and the proteolytic action may subserve structural reorganizations associated with learning and memory operations (By similarity).

-1- SUBCELLULAR LOCATION: Secreted.

-1- TISSUE SPECIFICITY: Brian and Leydig cells of the testis.

-1- TISSUE SPECIFICITY: Brian and Leydig cells of the testis.

-1- DISEASE: Defects in PRS312 are a cause of autosomal recessive nonsyndromic mental retaractation [MIM:249500]. Mental retardation is a mental disorder characterized by significantly subaverage constant intellectual functioning associated with impairments in adaptative behavior and manifested during the developmental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PubMed=12459588; DOI=10.1126/science.1076521; Molinari F., Rio M., Meskenaite V., Encha-Razavi F., Auge J., Bacq D., Briault S., Vekemans M., Munnich A., Attie-Bitach T., Sonderegger P.,

Waggoner D.W., Gomez-Munoz A., Dewald J., Brindley D.N.;
Thosphatidate phosphotydrolase catalyzes the hydrolysis of ceramide
Thosphate. lysophosphatidate, and sphingosine 1-phosphate.";
J. Biol. Chem. 271:16506-16509 (1996).
C. PRONCTION: Broad-specificity phosphotydrolase that dephosphorylates
C. Sorgenous bioactive glycerolipids and sphingolipids. Catalyzes the
conversion of phosphatidic acid (PA) to diacyllycerol (DG). In
addition it hydrolyzes lysophosphatidic acid (LPA), diacyl
C. Glycerol pyrophosphate (BCPP), ceramide-1-phosphate (C-1-P) and
sphingosine-1-phosphate (BCPP), ceramide-1-phosphate (C-1-P) and
sphingosine-1-phosphate (BCPP).
C. I- CATALYTIC ACTIVITY: A 3-sn-phosphatidate + H(2)O = a 1,2-diacyl-
Sn-glycerol + phosphate.
C. I- SUBUNIT: Homodimer (By similarity).
C. I- SUBCNIT: Homodimer (By similarity).
C. I- SUBCNIT: Homodimer (By similarity).

-i- PATHWAY: NAD biospynthesis; nicotinamide to NaMN; second step.
-i- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-i- MISCELLANBOWS: Requiree ATP as well as phosphoribosyl pyrophosphate for activity.
-i- SIMILARITY: Belongs to the NAPRTase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     54.8%; Score 40; DB 1; Length 399; 85.7%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nature 413:852-856(2001).
-!- CATALVIIC ACTIVITY: Nicotinate D-ribonucleotide + diphosphate - nicotinate + 5-phospho-alpha-D-ribose 1-diphosphate.
-!- PATHWAY: ND biosynthesis; nicotinamide to NaWN; second step.
-!- SUBCELLUIAR LOCATION: Cytoplasmic (By similarity).
-!- SUBCELLUIAR LOCATION: Cytoplasmic (By similarity).

-!- CATALYTIC ACTIVITY: Uracil + D-ribose 5-phosphate = pseudouridine
5'-phosphate + H(2)0.
-!- SIMILARITY: Belongs to the pseudouridine synthase truD family.
-!- SIMILARITY: Contains 1 TRUD domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

A; Note: this sequence, which matches the sequence attributed to type 3 in Fig. 2, matches
nitries REOILAM3P and REO3LAM3P now differ only by the sequence correction apparently made
